

Alignment of Superhydrophobicity Module to the Next Generation

Science Standards

The Next Generation Science Standards (NGSS) were published in April 2013. They consist of statements that convey performance expectations for students. Each performance expectation is a single statement that is built from three parts: science and engineering practices (Practices), disciplinary core ideas (DCI) and crosscutting concepts.

Each performance expectation is a single statement that is built from three components: science and engineering practices (Practices), disciplinary core ideas (DCI) and crosscutting concepts. Each lesson was evaluated to determine alignment to (1) Performance Expectations, and (2) alignment to the individual components.

Since the Superhydrophobicity Module was created prior to the release of these standards one would expect that it aligns most readily to the individual statements that articulate the practices, DCIs, and crosscutting concepts. Our analysis revealed support for the performance expectation found in Table 1.

TABLE 1: ALIGNMENT TO SPECIFIC PERFORMANCE EXPECTATIONS	ALIGNMENT RATING
<i>HS-PS2-6</i> Communicate scientific and technical information about why the molecular-level structure is important in the functioning of designed materials.	<i>Strong alignment</i>

Table 2 clarifies the nature of the alignments by Practice, DCI, and Crosscutting Concept for the Performance Expectation above:

TABLE 1. ALIGNED PRACTICES, DISCIPLINARY CORE IDEAS, AND CROSSCUTTING CONCEPTS		
PRACTICES	DCI	CROSSCUTTING CONCEPT
<i>HS. Obtaining, evaluating, and communicating information</i> Communicate scientific and technical information (e.g. about the process of development and the design and performance of a proposed process or system) in multiple formats (including orally, graphically, textually, and mathematically). <i>Partial in student materials</i>	<i>HS.PS2.B: Types of interactions:</i> Attraction and repulsion between electric charges at the atomic scale explain the structure, properties, and transformations of matter, as well as the contact forces between material objects. <i>Strong in teacher and student materials</i>	<i>No alignments</i>
