REVIEW

- Inspection Types
 - Acceptance Sampling
- Sample Planning & Logistics
 - Traceability
 - When/where/who to sample
 - Collection methods
 - Quantity needed (Sample plans vs 100%)
- Inspection process:
 - Measurement of sample
 - Comparison against specification
 - Decision based on results
 - Corrective action, if necessary

Developed as part of NSF ATE Grant #1304474

5

SHOP MATH

- Inspection process:
 - Measurement of sample
 - **Comparison against specification**
 - Decision based on results
 - Corrective action, if necessary

Developed as part of NSF ATE Grant #1304474

6

SHOP MATH

- General math skills needed in production (service)

Universal

- Fractions
- Ratios
- Decimals
- Percentages
- Equations
- Conversions

Dimensional

- Circles
- Triangles
- Perimeters
- Areas
- Angles
- Volumes (solids)
- Tapers

*Outside the context
of this course*

Developed as part of NSF ATE Grant #1304474

7

SHOP MATH

- Fractions
 - Adding / Subtracting
 - lowest common denominator
 - reducing

$$3/8 + 5/16 =$$

$$1/3 + 1/4 =$$

$$3/8 - 13/64 =$$

Developed as part of NSF ATE Grant #1304474

8

SHOP MATH - Universal

- Fractions

- Adding / Subtracting
 - lowest common denominator
 - reducing

- Multiplying / Dividing

$$6/32 * 1/4 =$$

$$3/4 \div 3/8 =$$

Developed as part of NSF ATE Grant #1304474

9

SHOP MATH - Universal

- Ratios

70:30

10:1

4:1

Developed as part of NSF ATE Grant #1304474

10

SHOP MATH - Universal

- Decimals
 - Places
 - 0.abcdef (etc.)
 - A = 0.1 tenths
 - B = 0.01 hundredths
 - C = 0.001 thousandths
 - D = 0.0001 ten thousandths (may also be called tenths)
 - E = 0.00001 hundred thousandths
 - F = 0.000001 millionths (also called parts per million ppm)
 - ...
 - = 0.000000001 billionths (ppb parts per billion)
 - ...
 - = 0.000000000001 trillionths (ppt parts per trillion)

Developed as part of NSF ATE Grant #1304474

11

SHOP MATH - Universal

- Decimals
 - Places
 - Fraction conversion
 - $\frac{1}{16} =$
 - $\frac{3}{32} =$
 - Multiplying/Dividing
 - $0.25 * 12$
 - $12 \div 0.25$

Developed as part of NSF ATE Grant #1304474

12

SHOP MATH - Universal

- Decimals
 - Places
 - Fraction conversion
 - Multiplying/Dividing
 - Converting Percentages to decimal (and vice versa)

$$14.17\% = 0.$$

$$0.005 = \quad \%$$

Developed as part of NSF ATE Grant #1304474

13

SHOP MATH - Universal

- Decimals
 - Places
 - Fraction conversion
 - Multiplying/Dividing
 - Converting Percentages to decimal (and vice versa)
 - Scientific notation

$$2.5 \times 10^5$$

$$2.5 \times 10^{-4}$$

Developed as part of NSF ATE Grant #1304474

14

STATISTICS REVIEW

- Definition
...science of collecting, organizing, analyzing and interpreting data in order to make decisions...
- Two Branches
 - Descriptive – organization, summarization & display of data
 - Inferential –uses sample to draw conclusions about a population
- Data Sets
 - Population: collection of ALL outcomes, measurements, etc.
 - Sample: subset or part of population

Quality Assurance & Quality Control are based on inferential
--- infer release of lot based on results of sample ---

*The difference between the statistic inferred from the sample
and the true population statistic is known as sampling error;*

Developed as part of NSF ATE Grant #1304474

15

STATISTICS REVIEW

- Understanding data
 - Quantitative vs qualitative
 - Discrete versus continuous
 - All (continuum) values possible
 - Integers
 - Time sequence
 - Counts
 - Pass / Fail (go/no-go)

Developed as part of NSF ATE Grant #1304474

16

STATISTICS REVIEW

- Understanding data

STATISTICS REVIEW

- Understanding data
 - Quantitative vs qualitative
 - Discrete versus continuous
 - Sequenced
 - Time (hours)
 - Monthly
 - Manufactured order (1-100..)

Developed as part of NSF ATE Grant #1304474

20

STATISTICS REVIEW

- Understanding data
 - Quantitative vs qualitative
 - Discrete versus continuous
 - Sequenced

Descriptive Statistics

- Measures of central tendency
- Measures of dispersion
- Measures of shape

Developed as part of NSF ATE Grant #1304474

21

STATISTICS REVIEW

- Understanding data
 - Quantitative vs qualitative
 - Discrete versus continuous

\bar{x}

Developed as part of NSF ATE Grant #1304474

22

STATISTICS REVIEW

– Measures of central tendency

• Mean

- Arithmetic average of the data

$$(\sum x_1 + x_2 + \dots) / n \quad x = \text{individual values, } n = \text{total number measured}$$

Known as x-bar () for the sample

Known as mu (μ) for population

• Median

- Middle number that separates the data

Example: 2 3 4 5 9 median is 4 (mean is 4.6)

2 3 4 5 6 9 median is 4.5 (mean is 4.8)

• Mode

- Number that appears most frequently

Example: 2 3 6 8 9 6 7 10 11 6 4 5 12

Developed as part of NSF ATE Grant #1304474

23

STATISTICS REVIEW

• Understanding data

- Quantitative vs qualitative
- Discrete versus continuous

– Measures of central tendency

- Mean (arithmetic average)
- Median (middle number of data set)
- Mode (number that appears most frequently)

Example: 2 3 6 8 9 6 7 10 11 6 4 5 12

mean = 6.8 $[(2+3+4+5+6+6+7+8+9+10+11+12)/13]$

median = 6 (2 3 4 5 6 6 6 7 8 9 10 11 12)

mode = 6

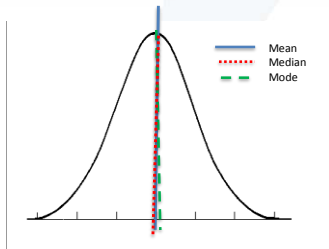

Developed as part of NSF ATE Grant #1304474

24

STATISTICS REVIEW

– Measures of central tendency

- Mean (arithmetic average)
- Median (middle number of data set)
- Mode (number that appears most frequently)

When the distribution of the results is “normal” the mean, median and mode will be equal

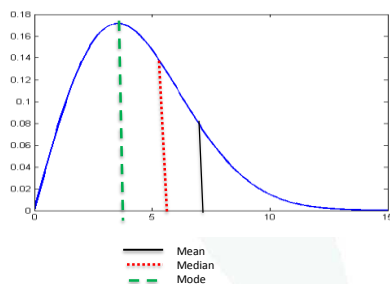

Developed as part of NSF ATE Grant #1304474

25

STATISTICS REVIEW

– Measures of central tendency

- Mean (arithmetic average)
- Median (middle number of data set)
- Mode (number that appears most frequently)

When the distribution is not normal, the median is the best indicator of central tendency – not affected by outliers.

Developed as part of NSF ATE Grant #1304474

26

STATISTICS REVIEW

Central Tendency	Advantage	Disadvantage
Mean (arithmetic average)	Center of gravity of the data	Extreme values may distort the picture
	Uses all data	May not be the actual value of any data point
	No sorting needed	
Median (middle number of data set)	Idea of where most data located	Data must be sorted/arranged
	Little calculation required	Extreme values may be important
	Insensitive to extreme values	Two medians cannot be averaged for combined median
		More variation between samples
Mode (number that appears most frequently)	Not influenced by extreme values	Data may not have a mode
	Is an actual value	
	Can be detected visually in plots	
	No calculating or sorting necessary	

Developed as part of NSF ATE Grant #1304474

27

STATISTICS REVIEW

– Measures of Dispersion

• Range

- Difference between the largest and smallest value within the data set

Example: 3 5 7 9 8 4 1 8 7

Range is 8 (9-1)

• Variance

- Sum of the squared difference from the mean divided by the sample size

Known as S^2 for the sample

Known as σ^2 for the population

$$\sigma^2 = \frac{\sum (x - \mu)^2}{N} \quad S^2 = \frac{\sum (x - \bar{X})^2}{n-1}$$

Developed as part of NSF ATE Grant #1304474

28

STATISTICS REVIEW

– Measures of Dispersion

- **Range** (difference between largest and smallest)
- **Variance** (Sum of the squared difference from the mean divided by the sample size)

• Standard Deviation

- Square root of the variance

Known as s for the sample

Known as σ for the population

$$\sigma = \sqrt{\sum (x - \mu)^2 / N} \quad S = \sqrt{\sum (x - \bar{x})^2 / n - 1}$$

Developed as part of NSF ATE Grant #1304474

29

STATISTICS REVIEW

• Understanding data

- Quantitative vs qualitative
- Discrete versus continuous
- Measures of central tendency (mean, median, mode)
- Measures of dispersion (range, variance, standard deviation)

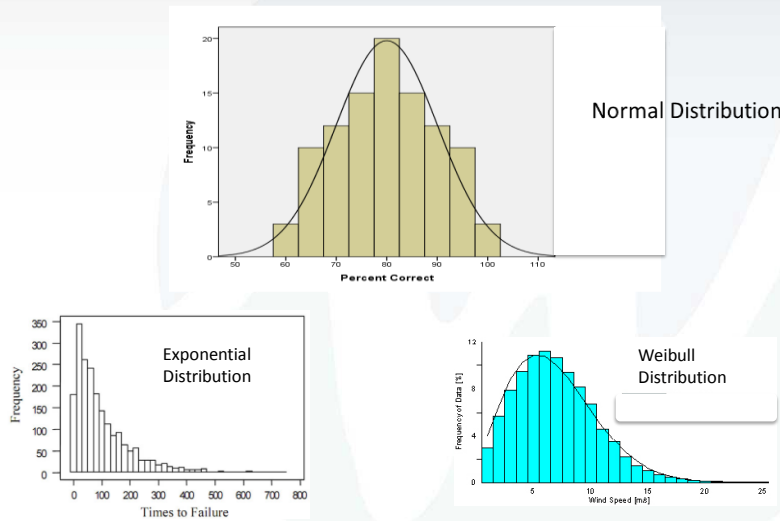

– Measures of shape

- Continuous frequency distributions (variable data)
 - Normal
 - Exponential
 - Weibull

Developed as part of NSF ATE Grant #1304474

30

Continuous Frequency Distributions

Developed as part of NSF ATE Grant #1304474

31

STATISTICS REVIEW

*Quality Assurance & Quality Control are based on inferential
--- infer release of lot based on results of sample ---*

*The difference between the statistic inferred from the sample and the
true population statistic is known as sampling error*

Developed as part of NSF ATE Grant #1304474

33

STATISTICS REVIEW

- Understanding data
 - Quantitative vs qualitative
 - Discrete versus continuous
 - Measures of central tendency (mean, median, mode)
 - Measures of dispersion (range, variance, standard deviation)
 - Measures of shape
 - Continuous frequency distributions (variable data)
 - Discrete frequency distributions (attribute data)

*Quality Assurance & Quality Control are based on inferential
--- infer release of lot based on results of sample ---*

*The difference between the statistic inferred from the sample and
the true population statistic is known as sampling error;*

- Large sample size = smaller sample error

Developed as part of NSF ATE Grant #1304474

34

Central Limit Theorem

- Central Limit Theorem

"... the [arithmetic mean](#) of a sufficiently large number of iterates (*samples*) of [independent random variables](#), each with a well-defined expected value and well-defined [variance](#), will be approximately [normally distributed](#), regardless of the underlying distribution.." wikipedia.com

This can be achieved with 30 samples (50 in some statistics books).

Why is this important?

- *Quality Assurance & Quality Control are based on inferential statistics; determine release of lot based on results of sample*
- *Large sample size = smaller sample error*
- *When the distribution of the results is "normal" the mean, median and mode will be equal*

Therefore $\bar{x} \cong \mu$ (sample mean approximates population mean)

and $s \cong \sigma$ (sample standard deviation approximates population standard deviation)

Developed as part of NSF ATE Grant #1304474

35

HOW STATISTICS USED

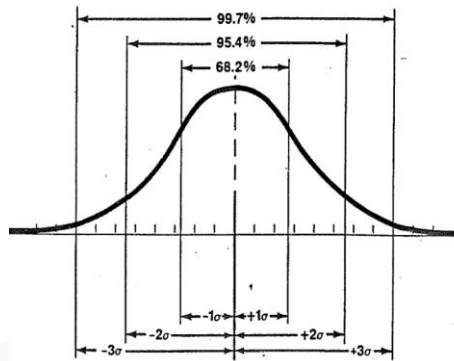

- Two Branches
 - Descriptive – organization, summarization & display of data
 - Inferential –uses sample to draw conclusions about a population
- Understanding data
 - Measures of **central tendency**
 - **mean**, median, mode
 - Measures of **dispersion**
 - range, variance, **standard deviation**
 - Measures of **shape**
 - Variable Data = **Normal**, weibull, etc.

Developed as part of NSF ATE Grant #1304474

36

HOW STATISTICS USED

- Understanding data
 - Measures of central tendency (mean, median, mode)
 - Measures of dispersion (range, variance, standard deviation)
 - Measures of shape (variable data = normal, etc.)
- Standard deviation is used to predict whether product remains within specification as it is manufactured
 - Often referred to as sigma
 - 1 sigma = 68.2% of results
 - 2 sigma = 95.4%
 - 3 sigma = 99.7%

Developed as part of NSF ATE Grant #1304474.

37

STATISTICS REVIEW

*Quality Assurance & Quality Control are based on inferential
 --- infer release of lot based on results of sample ---
 -- comparison of products, machines, etc. --*

- Hypothesis testing
 - Statistical hypothesis testing can also be known as confirmatory data analysis
 - Used for making informed decisions
 - Product pre- and post- change, is it the same?
 - Material vendor A versus vendor B, are they equivalent?
 - Marketing decisions
 - New treatments (medicine, therapies, etc.)

Developed as part of NSF ATE Grant #1304474.

38

STATISTICS REVIEW

*Quality Assurance & Quality Control are based on inferential
--- infer release of lot based on results of sample ---
-- comparison of products, machines, etc. --*

- Hypothesis testing
 - Statistical hypothesis testing can also be known as confirmatory data analysis
 - Used for making informed decisions
 - Product pre- and post- change, is it the same?
 - Material vendor A versus vendor B, are they equivalent?
 - Marketing decisions
 - New treatments (medicine, therapies, etc.)
- Comparison of means or variation?

Developed as part of NSF ATE Grant #1304474

39

STATISTICS REVIEW

- Comparison of means or **variation**?
 - Is there a difference in the spread (variation) of the data between the “sample” and previous population?

Comparing the risks of having an accident among several groups of people

Are there fewer reported side-effects from the new drug versus the old drug?

Are the two samples statistically different?

data driven decision rather than “gut” feel

Developed as part of NSF ATE Grant #1304474

40

STATISTICS REVIEW – Hypothesis Testing

- Comparison of means or variation?
- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - There is a significance (confidence) level

Example 95% confident that Vendor B is the same as current Vendor (A).

Developed as part of NSF ATE Grant #1304474

41

STATISTICS REVIEW – Hypothesis Testing

- Comparison of means or variation?
- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - There is a significance (confidence) level.
 - Reject the null hypothesis
 - Is there enough data to cast doubt on conventional wisdom

Developed as part of NSF ATE Grant #1304474

42

HYPOTHESIS TESTING

- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - There is a significance level.
 - Reject the null hypothesis
 - Is there enough data to cast doubt on conventional wisdom
- How to:
 - State null hypothesis and alternate hypothesis

Example: Person in the court system is considered innocent until proven guilty

null hypothesis (H_0) = not guilty

alternate hypothesis (H_1) = guilty

Developed as part of NSF ATE Grant #1304474

43

HYPOTHESIS TESTING

- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - Reject the null hypothesis
- How to:
 - State null hypothesis and alternate hypothesis
 - Select significance level
 - Probability below which null hypothesis will be rejected
 - Typically 5% or 1% (0.05 or 0.01)

Developed as part of NSF ATE Grant #1304474

44

HYPOTHESIS TESTING

- Selecting significance level
 - Type I (α) error
 - Rejecting the null hypothesis when it is true
 - Post-change lot considered different when it was equivalent
 - Type II (β) error
 - Accepting the null hypothesis when it is false
 - Post-change lot was considered equivalent when it was different.

Developed as part of NSF ATE Grant #1304474

45

HYPOTHESIS TESTING

- Selecting significance level
 - Type I (α) error
 - Rejecting the null hypothesis when it is true
 - Type II (β) error
 - Accepting the null hypothesis when it is false

Example: Person in the court system is considered innocent until proven guilty

null hypothesis (H_0) = not guilty
 alternate hypothesis (H_1) = guilty

	H_0 is true Truly Not Guilty	H_1 is true Truly Guilty
Accept the Null Acquittal	Right decision	Wrong decision TYPE II (β) error
Reject the Null Conviction	Wrong decision Type I (α) error	Right Decision

Developed as part of NSF ATE Grant #1304474

46

HYPOTHESIS TESTING

- Selecting significance level
 - Type I (α) error
 - Rejecting the null hypothesis when it is true
 - Type II (β) error
 - Accepting the null hypothesis when it is false

Example: Vendor A product has average diameter 0.055"
 new Vendor (B) has average diameter 0.050"
 Should we switch to Vendor B because they're better?

null hypothesis (H_0) = better

alternate hypothesis (H_1) = not better

	H_0 is true Truly Better	H_1 is true Truly Not Better
Accept the Null Switch to Vendor B	Right decision	Wrong decision TYPE II (β) error
Reject the Null Stay with Vendor A	Wrong decision Type I (α) error	Right Decision

Developed as part of NSF ATE Grant #1304474

47

HYPOTHESIS TESTING

- Selecting significance level
 - Type I (α) error
 - Rejecting the null hypothesis when it is true
example: Post-change lot considered different when it was equivalent
 - Type II (β) error
 - Accepting the null hypothesis when it is false
example: Post-change lot was considered equivalent when it was different.

5% ($p_\alpha = 0.05$) means 5% of the time the process change may be rejected when it was actually acceptable

1% ($p_\alpha = 0.01$) means 1% of the time the process change may be rejected when it was actually acceptable

Developed as part of NSF ATE Grant #1304474

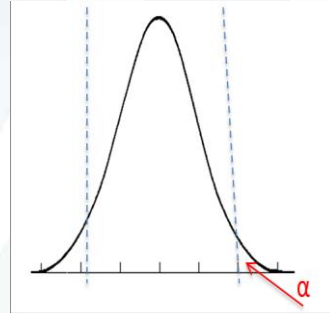

48

HYPOTHESIS TESTING

- Selecting significance level
 - Type I (α) error
 - Rejecting the null hypothesis when it is true
 - Post-change lot considered different when it was equivalent
 - Type II (β) error
 - Accepting the null hypothesis when it is false
 - Post-change lot was considered equivalent when it was different.

5% ($p_\alpha = 0.05$) means 5% of the time the process change may be rejected when it was actually acceptable

1% ($p_\alpha = 0.01$) means 1% of the time the process change may be rejected when it was actually acceptable

Developed as part of NSF ATE Grant #1304474

49

HYPOTHESIS TESTING

- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - Reject the null hypothesis
- How to:
 - State null hypothesis and alternate hypothesis
 - Select significance level
 - Probability below which null hypothesis will be rejected
 - Typically 5% or 1% (0.05 or 0.01)
 - Consider statistical assumptions (i.e. is the data normally distributed, values independent, etc.)

Developed as part of NSF ATE Grant #1304474

50

HYPOTHESIS TESTING

- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - Reject the null hypothesis
- How to:
 - State null hypothesis and alternate hypothesis
 - Select significance level
 - Probability below which null hypothesis will be rejected
 - Typically 5% or 1% (0.05 or 0.01)
 - Consider statistical assumptions (i.e. is the data normally distributed, values independent, etc.)
 - **Select relevant test statistic**
 - Student's t
 - Z-Test

Developed as part of NSF ATE Grant #1304474

51

HYPOTHESIS TESTING

- Selecting relevant test statistic
 - Student's t (comparing means)
 - Use when
 - Sample size < 30
 - Independent samples
 - Variances do not have to be equal
 - Normal distribution
 - z test (comparing means)
 - Assumptions
 - Sample size > 30
 - Independent samples
 - Variances equal

Developed as part of NSF ATE Grant #1304474

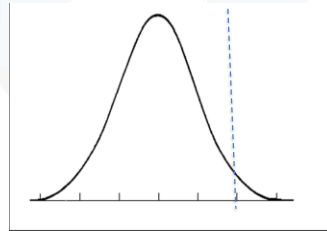

52

HYPOTHESIS TESTING

- Selecting relevant test statistic
 - Student's t (comparing means)
 - Use when
 - Sample size < 30
 - Independent samples
 - Variances do not have to be equal
 - Normal distribution
 - z test (comparing means)
 - Assumptions
 - Sample size > 30
 - Independent samples
 - Variances equal

One-sided testing

One sided: is the result larger (smaller) than the original

Developed as part of NSF ATE Grant #1304474

53

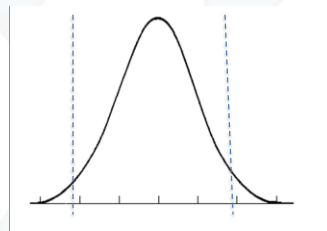

HYPOTHESIS TESTING

- Selecting relevant test statistic
 - Student's t (comparing means)
 - Use when
 - Sample size < 30
 - Independent samples
 - Variances do not have to be equal
 - Normal distribution
 - z test (comparing means)
 - Assumptions
 - Sample size > 30
 - Independent samples
 - Variances equal

One-sided testing versus

Two-sided testing

- One sided: is the result larger (smaller) than the original
- Two sided: is the result different than the original

Developed as part of NSF ATE Grant #1304474

54

HYPOTHESIS TESTING

- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - Reject the null hypothesis
- How to:
 - State null hypothesis and alternate hypothesis
 - Consider statistical assumptions (i.e. is the data normally distributed, values independent, etc.)
 - Select significance level
 - Probability below which null hypothesis will be rejected
 - Typically 5% or 1% (0.05 or 0.01)
 - Select relevant test statistic
 - Student’s t
 - Z-Test
 - Compute the test statistic from the observed values

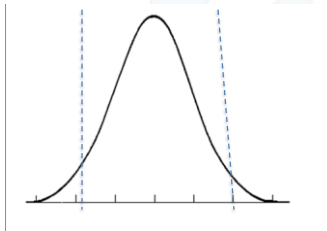

Developed as part of NSF ATE Grant #1304474

55

HYPOTHESIS TESTING

One-sided testing versus Two-sided testing

- One sided: is the result larger (smaller) than the original
- Two sided: is the result different than the original

- Student’s t (comparing means)
 - Looking at differences (before/after)

\bar{X} = sample mean

μ_0 = target value or population mean

s = sample standard deviation

n = number of test samples

$$t = \frac{\bar{X} - \mu_0}{s / \sqrt{n}}$$

$$s_d = \sqrt{\sum (x - \bar{X})^2 / n - 1}$$

Compare calculated “t” with table value for α

Developed as part of NSF ATE Grant #1304474

56

HYPOTHESIS TESTING

- Statistical inference using data
 - “Statistically significant” when predicted as unlikely to have occurred by chance alone
 - Reject the null hypothesis
- How to:
 - State null hypothesis and alternate hypothesis
 - Consider statistical assumptions (i.e. is the data normally distributed, values independent, etc.)
 - Select significance level
 - Probability below which null hypothesis will be rejected
 - Typically 5% or 1% (0.05 or 0.01)
 - Select relevant test statistic
 - Student’s t
 - Z-Test
 - Compute the test statistic from the observed values
 - Compare result with test statistic table values

Developed as part of NSF ATE Grant #1304474

57

HYPOTHESIS TESTING

XII. APPENDIX - TABLES

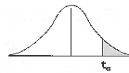

Table V t Distribution

d.f.	$t_{0.100}$	$t_{0.050}^*$	$t_{0.025}^{**}$	$t_{0.010}$	$t_{0.005}$	d.f.

58

HYPOTHESIS TESTING

- How to:
 - State null hypothesis and alternate hypothesis
 - Consider statistical assumptions (i.e. is the data normally distributed, values independent, etc.)
 - Select significance level
 - Select relevant test statistic
 - Compute the test statistic from the observed values
 - Compare result with test statistic table values
 - IF the calculated value is $>$ (greater than) the table value
accept the alternate hypothesis
 - IF the calculated value is $<$ (less than) the table value
accept the null hypothesis

Developed as part of NSF ATE Grant #1304474

59

HYPOTHESIS TESTING

- How to:
 - State null hypothesis and alternate hypothesis
 - Consider statistical assumptions (i.e. is the data normally distributed, values independent, etc.)
 - Select significance level
 - Select relevant test statistic
 - Compute the test statistic from the observed values
 - Compare result with test statistic table values
 - IF the calculated value is $<$ (less than) the table value
accept the null hypothesis
There is not enough evidence to say there's a statistical difference
 - IF the calculated value is $>$ (greater than) the table value
accept the alternate hypothesis
There is enough evidence to say there's a statistical difference

Developed as part of NSF ATE Grant #1304474

60

HYPOTHESIS TESTING

- Compare result with test statistic table values
 - IF the calculated value is > (greater than) the table value
accept the alternate hypothesis
 - IF the calculated value is < (less than) the table value
accept the null hypothesis

Example:

A new process generated products with the following weights (g)
0.46 0.61 0.52 0.57 0.54
To be profitable an average weight > 0.50g is required
With 95% confidence, is the new process recommended

Null (H_0) = average \leq 0.50g

Alternate (H_1) = average > 0.50g

Developed as part of NSF ATE Grant #1304474

61

HYPOTHESIS TESTING

Example:

- A new process generated products with the following weights (g)
0.46 0.61 0.52 0.57 0.54
- To be acceptable an average weight > 0.50g is required

With 95% confidence, is the new process recommended

- Student's t (comparing means)
 - Looking at differences (before/after)

\bar{X} = sample mean

μ_0 = target value or population mean

s = sample standard deviation

n = number of test samples

$$t = \frac{\bar{X} - \mu_0}{s / \sqrt{n}}$$

$$s_d = \sqrt{\sum (x - \bar{X})^2 / n - 1}$$

Compare calculated "t" with table value for α

Developed as part of NSF ATE Grant #1304474

62

HYPOTHESIS TESTING

Example:

- A new process generated products with the following weights (g)
0.46 0.61 0.52 0.57 0.54
- To be acceptable an average weight > 0.50g is required

With 95% confidence, is the new process recommended

$$\bar{X} = 0.54$$

$$\mu_0 = 0.50$$

$$s = 0.056$$

$$n = 5$$

One tailed test because ">"

$$\alpha = 0.05$$

$$df = 4$$

- Student's t (comparing means)

- Looking at differences (before/after)

\bar{X} = sample mean

μ_0 = target value or population mean

s = sample standard deviation

n = number of test samples

$$t = \frac{\bar{X} - \mu_0}{s / \sqrt{n}}$$

$$s_d = \sqrt{\sum (x - \bar{X})^2 / n - 1}$$

Compare calculated "t" with table value for α

Developed as part of NSF ATE Grant #1304474

63

HYPOTHESIS TESTING

- Compare result with test statistic table values
- IF the calculated value is > (greater than) the table value
- IF the calculated value is < (less than) the table value

Example:

A new process generated products with the following weights (g)

0.46 0.61 0.52 0.57 0.54

To be acceptable an average weight > 0.50 g is required

With 95% confidence, is the new process recommended

Calculated t = 1.597 Table t = 2.132

calculated value < table value;

therefore, insufficient evidence to recommend the new process

difference not statistically significant (or improvement)

Developed as part of NSF ATE Grant #1304474

64

HYPOTHESIS TESTING

Statistical Difference (Significance)

vs.

Practical Difference (Significance)

With large sample sizes (i.e. 10,000 data points) may find a statistical difference, but when looked at from business standpoint may not matter

Developed as part of NSF ATE Grant #1304474

65

HYPOTHESIS TESTING

Statistical vs. Practical Difference (Significance)

With large sample sizes (i.e. 10,000 data points) may find a statistical difference, but when looked at from business standpoint may not matter

Example:

Comparing product from 2 plants

Product specification = 1.34 – 2.34

Look at 6 months worth of data

300 lots, 20,000 data points, 4 different raw material lots

Plant 1: average = 1.78 range = 1.48 - 2.21

Plant 2: average = 2.01 range = 1.51 – 2.25

Statistically different, but not distinguishable at customer

Developed as part of NSF ATE Grant #1304474

67

QUALITY SYSTEMS

- Quality is a product (or service) with the *features and characteristics* which determine *desirability* and can be *controlled* to meet certain *basic requirements*.
- Quality System
 - Say what you do (documents)
 - Do what you say (training)
 - Record what you did (write it down, quality records)
 - **Check the results (analysis)**
 - Act on the difference (improvement)

Developed as part of NSF ATE Grant #1304474

68

ANALYZING THE DATA

- Picture vs Numbers in a table
- Statistical analysis
 - what is the data telling us
 - Decision making

Developed as part of NSF ATE Grant #1304474

69

SEVEN QUALITY TOOLS

1. Flow Chart / Run Chart
2. Check Sheet
3. Control Charts
4. Cause and Effect Diagram (a.k.a. Ishikawa or Fishbone)
- 5. Histogram**
6. Pareto Chart
7. Scatter Plot (Diagram)

Developed as part of NSF ATE Grant #1304474

70

HISTOGRAM

- Demonstrates frequency of measurement
 - Shows how often each value from a data set occurs
- Similar to a bar chart
 - Key difference
 - Bar chart depicts **categories**
Example: flowers, trees, vegetables, fruits
 - Histogram depicts **frequency of occurrence**
Example: number of businesses with revenue ranges

Developed as part of NSF ATE Grant #1304474

71

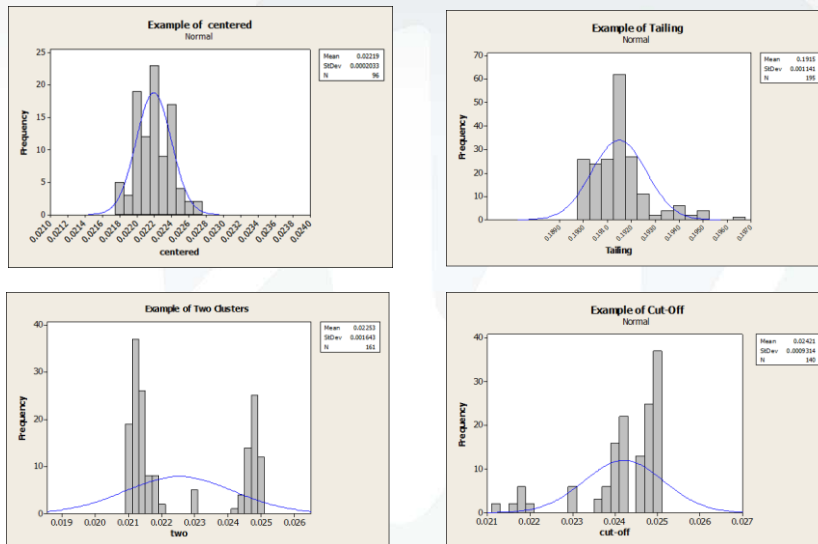

HISTOGRAM

- Demonstrates frequency of measurement
 - Shows how often each value from a data set occurs
- When to use a histogram
 - Data is numerical (not pass/fail)
 - Determine whether process distribution is normal
 - Determine whether process meets customer requirements
 - Measuring supplier process output
 - Are two process outputs the same
- Shape of the graph can provide clues

Developed as part of NSF ATE Grant #1304474

72

HISTOGRAM EXAMPLE

ANALYZING DATA – Using Excel

- Pivot Tables
 - Method for organizing columns into tabular format

The screenshot displays the Microsoft Excel interface. The main worksheet contains a data table with columns: name, group, puzzle, count, red, blue, yellow, white. The data is summarized in a PivotTable located in the range K1:O3. The PivotTable has 'name' as the row label and 'count' as the column label. The data is summarized by 'group' and 'puzzle'. The PivotTable Fields task pane is visible on the right side of the screen, showing the fields available for the PivotTable.

name	group	puzzle	count	red	blue	yellow	white

BEAD EXPERIMENT

The screenshot shows a Microsoft Excel spreadsheet titled "BEAD EXPERIMENT". The spreadsheet displays the results of a t-test for two samples. The results table is as follows:

	Variable 1	Variable 2
Mean	29.88571429	29.57142857
Variance	192.6336134	184.1932773
Observations	35	35
Pearson Correlation	-0.755367639	
Hypothesized Mean Difference	0	
df	34	
t Stat	0.072298139	
P(T<=t) one-tail	0.471394141	
t Critical one-tail	1.690924255	
P(T<=t) two-tail	0.942788283	
t Critical two-tail	2.032244509	

Below the table, the following text is displayed:

No difference when Group A compared to Group B. (20 & 50 paddle data combined)

$p > 0.05$ not enough evidence to say statistically different
 $P < 0.05$ statistically different

The Data Analysis Toolpak dialog box is open, showing the list of statistical tools. The "t-Test: Two-Sample Assuming Equal Variances" option is selected.

Introduction to SPC

Developed as part of NSF ATE Grant #1304474

85

ANALYSIS – Statistical Process Control (SPC)

- *Quality is a product (or service) with the features and characteristics which determine desirability and can be controlled to meet certain basic requirements.*
- Inspection process:
 - Measurement of sample
 - Comparison against specification
 - Decision based on results
 - Corrective action, if necessary

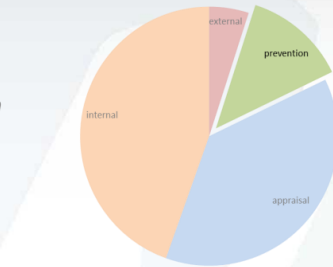

Developed as part of NSF ATE Grant #1304474

86

ANALYSIS – Statistical Process Control (SPC)

- *Quality is a product (or service) with the features and characteristics which determine desirability and can be controlled to meet certain basic requirements.*

- Inspection process:
 - Measurement of sample
 - Comparison against specification
 - Decision based on results
 - Corrective action, if necessary

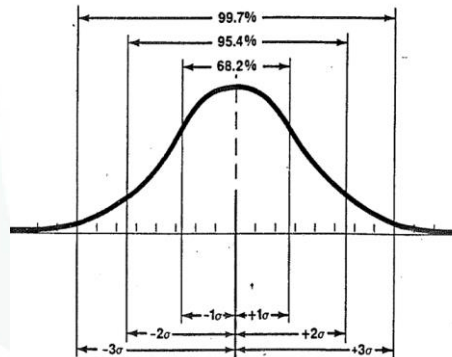

- Internal
 - Scrap, Rework
- Appraisal
 - Material Receipt
 - In-process/Final Inspection
- Prevention
 - Improvement, Planning

Developed as part of NSF ATE Grant #1304474

87

STATISTICAL PROCESS CONTROL (SPC)

- Measure of process stability or variability
 - Standard deviation is a measure of dispersion or spread of the data
 - Statistical calculation assumes normality
- Standard deviation is used to predict whether product remains within specification as it is manufactured
 - Often referred to as sigma
 - 1 sigma = 68.2% of results
 - 2 sigma = 95.4%
 - 3 sigma = 99.7%

Developed as part of NSF ATE Grant #1304474

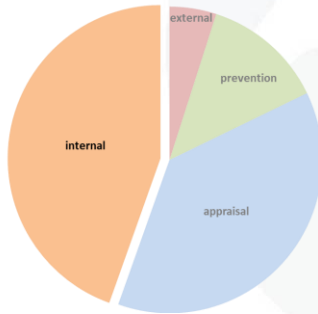

88

STATISTICAL PROCESS CONTROL (SPC)

- Measure of process stability or variability

“... SPC is applied in order to monitor and control a process. Monitoring and controlling the process ensures that it operates at its full potential. At its full potential, the process can make as much conforming product as possible with a **minimum** (if not an elimination) of **waste** (rework or scrap)...”

89

STATISTICAL PROCESS CONTROL (SPC)

- Measure of process stability or variability

“... SPC is applied in order to monitor and control a process. Monitoring and controlling the process ensures that it operates at its full potential. At its full potential, the process can make as much conforming product as possible with a minimum (if not an elimination) of waste (rework or scrap)...”

wikipedia.com

- A process under statistical control is predictable.

Developed as part of NSF ATE Grant #1304474.

90

CONTROL CHARTS

- Analyze variation in processes (manufacturing or administrative)
 - Walter Shewart (1931), *“The Economic Control of Quality of Manufactured Product”*
 - Line graphs that display dynamic process behavior

Developed as part of NSF ATE Grant #1304474.

91

SEVEN QUALITY TOOLS

1. Flow Chart / Run Chart
2. Check Sheet
3. Control Charts
4. Cause and Effect Diagram (a.k.a. Ishikawa or Fishbone)
5. Histogram
6. Pareto Chart
7. Scatter Plot (Diagram)

Developed as part of NSF ATE Grant #1304474.

92

CONTROL CHARTS

- Control chart types
 - Variable
 - X-bar / R (Average – Range)
 - Run charts (Single point data)
 - X / MR (Individual – Moving Range)
 - CuSum (Cumulative Sum)
 - EWMA (Exponentially Weighted Moving Average)
Most commonly used on production floor
 - Attribute
 - p chart (percent defective)
 - np chart (number defective)
 - c chart (number of defects)
 - u chart (number defects per unit)
Used widely for metrics and measures of overall effectiveness

Developed as part of NSF ATE Grant #1304474.

93

CONTROL CHARTS

- Control chart types
 - Variable

 - Specification Limits
 - Determined by Manufacturer in design/validation
 - Edges of manufacturing acceptable product
 - Control Limits
 - Calculated by Manufacturer

Prevent manufacturing scrap or rework.

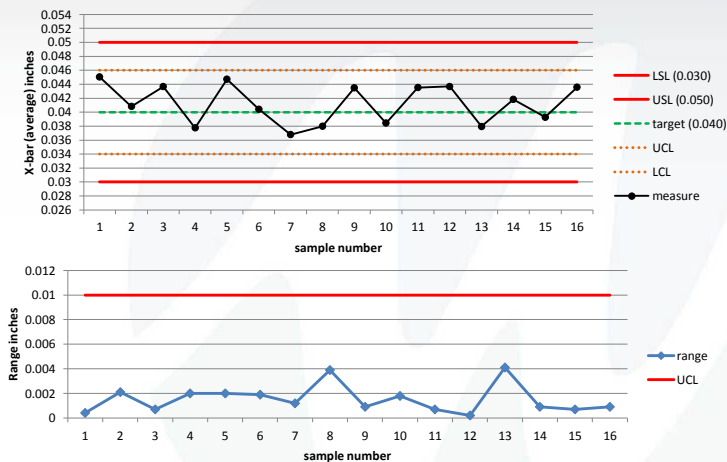

Machine control rather than having to inspect or test.

Developed as part of NSF ATE Grant #1304474.

99

SPC: X-Bar / R Charts

Rule of thumb for X-bar: $UCL = \bar{X} + 3s$ $LCL = \bar{X} - 3s$
 using mean (\bar{X}) and standard deviation established during process validation (capability) studies

Developed as part of NSF ATE Grant #1304474.

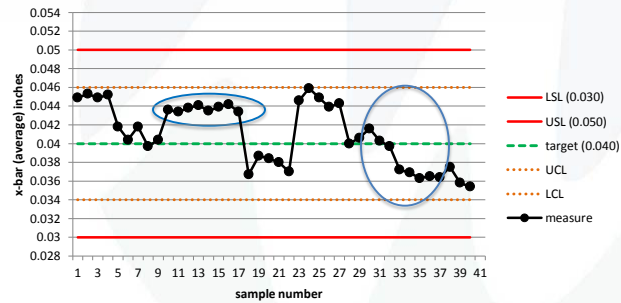

100

SPC RULES

- Five Common

1. Trends

- 7 or more consecutive points on one side of the center (target) line
- 7 or more consecutive points increasing or decreasing

Developed as part of NSF ATE Grant #1304474.

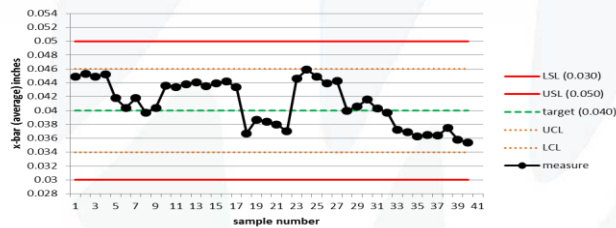

101

SPC RULES

- Five Common

- Trends

- 7 or more consecutive points on one side of the center (target) line
- 7 or more consecutive points increasing or decreasing

- Xbar - Machine wear; tool wear; tired operator
- R – change in operator skill, change in incoming material quality

Developed as part of NSF ATE Grant #1304474.

102

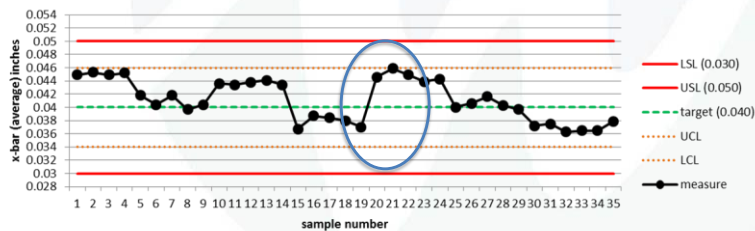

SPC RULES

- Five Common

1. Trends

2. Jumps in Process Level

- X-bar - Modification of production method or process
- Change in inspection device or method
- New operator or machine
- R- material / method / operator / inspection change

Developed as part of NSF ATE Grant #1304474.

103

SPC RULES

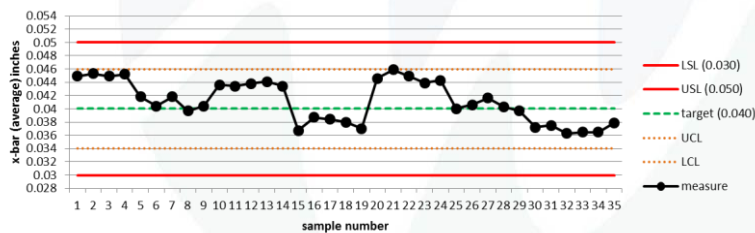

- Five Common

1. Trends

2. Jumps in Process Level

3. Recurring Cycles

- X-Bar – environment (temp/humid, Ashift/Bshift), regular rotation of machine or operator
- R- scheduled maintenance; tool wear

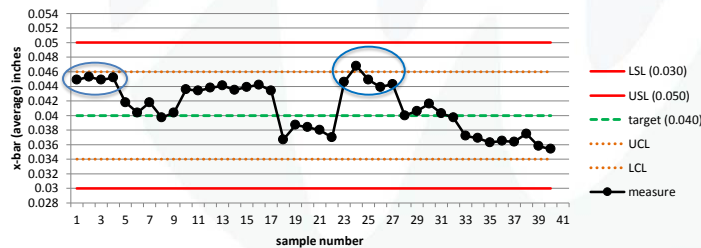

Developed as part of NSF ATE Grant #1304474.

104

SPC RULES

- Five Common

1. Trends
2. Jumps in Process Level
3. Recurring Cycles
4. Points near or outside limits
 - X-bar – over control, large systematic difference in material quality/test method/equipment
 - R – mixed quality of distinctly different materials

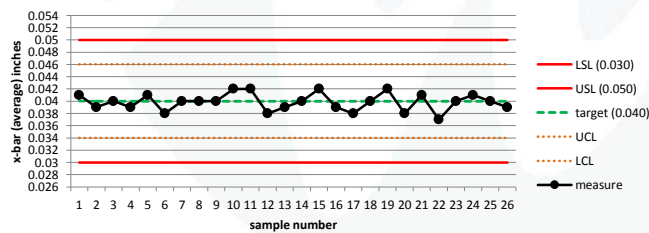

Developed as part of NSF ATE Grant #1304474.

105

SPC RULES

- Five Common

1. Trends
2. Jumps in Process Level
3. Recurring Cycles
4. Points near or outside limits
5. Lack of Variability
 - X-Bar- incorrect calculation of control limits; improvements since calculation
 - R – widely differing lot measurements; improvement since calculation

Developed as part of NSF ATE Grant #1304474.

106

PROCESS MEASURES

- SPC is measure of process stability or variability
 - A process under statistical control is predictable.
- Understanding process suitability for specifications
 - Machines equivalent
 - Effect of adjustments
 - Material variability
- Process Measures
 - Process Performance (Pp)
 - Process Capability (Cp)

Developed as part of NSF ATE Grant #1304474.

107

PROCESS MEASURES

- Process Measures
 - Process Performance (Pp)
 - Process Capability (Cp)

Often are discussed interchangeably, however the calculation of the values IS different.

The difference lies in how the standard deviation is handled.

Developed as part of NSF ATE Grant #1304474.

108

PROCESS MEASURES

- SPC is measure of process stability or variability
 - A process under statistical control is predictable.
- Understanding process suitability for specifications
 - Machines equivalent
 - Effect of adjustments
- Process Measures
 - Process Performance (Pp)
 - Process Capability (Cp)

Assumptions for conducting performance (capability) studies:

1. process is “stable” (in statistical control); allowing for predictive behavior.
2. both measures are calculated based on **normal distribution**
If the data are non-normal, it is either transformed or measures are calculated based on the alternate distribution.

Developed as part of NSF ATE Grant #1304474.

109

PROCESS PERFORMANCE

- Process Measures
 - Process Performance (Pp)
 - How well is the process running?

$$Pp = \frac{USL - LSL}{6\sigma}$$

Note: The standard deviation is calculated based on the square root of the variance

$$\sigma = \sqrt{\sum (xi - \bar{X})^2 / n - 1}$$

Developed as part of NSF ATE Grant #1304474.

110

PROCESS PERFORMANCE

- Process Measures

- Process Performance (Pp)

- How well is the process running?

- Process Performance Index (Ppk)

- Is the process centered on target or running at one of the specification limits

$$Ppk = \min(PPU, PPL)$$

PPU (process performance index upper)

PPL (process performance index lower)

$$PPU = \frac{USL - \bar{x}}{3\sigma}, \quad PPL = \frac{\bar{x} - LSL}{3\sigma}$$

Ppk > 1.33 ideal

Developed as part of NSF ATE Grant #1304474.

111

PROCESS MEASURES

- Process Measures

- Process Performance (Pp)

- How well is the process running?

- Process Capability (Cp)

- Measures ability to meet specifications

- Studies conducted to evaluate process

- Do nothing – process limits well within specifications
 - Change the specifications - may be unrealistic, Customer negotiation
 - Center the process – bring bulk of product into specification (reduce risk)
 - Reduce Variability – consistency of delivery to customer
 - Accept the Losses – short term solution, rework/scrap efficiency

Developed as part of NSF ATE Grant #1304474.

112

PROCESS CAPABILITY

- Process Measures
 - Process Capability (Cp)
 - Does the process produce product meeting specification?

$$Cp = \frac{USL - LSL}{6 \sigma_{\omega}}$$

Note: standard deviation is estimated using the average range of the data set and an unbiasing constant.

$$\sigma_{\omega} = \frac{R}{d_2}$$

Unbiasing Constants can be calculated, but this is rarely done and can either be looked up in a reference table or Cp values are calculated using software.

Developed as part of NSF ATE Grant #1304474.

113

PROCESS CAPABILITY

- Process Measures
 - Process Capability (Cp)
 - Does the process produce product meeting specification?
 - Process Capability Index (Cpk)
 - Is the process centered on target or running at one of the specification limits

$$Cpk = \min(CPU, CPL)$$

CPU (process capability index upper)
CPL (process capability index lower)

$$CPU = \frac{USL - \bar{x}}{3 \sigma_{\omega}}, \quad CPL = \frac{\bar{x} - LSL}{3 \sigma_{\omega}}$$

For Customers

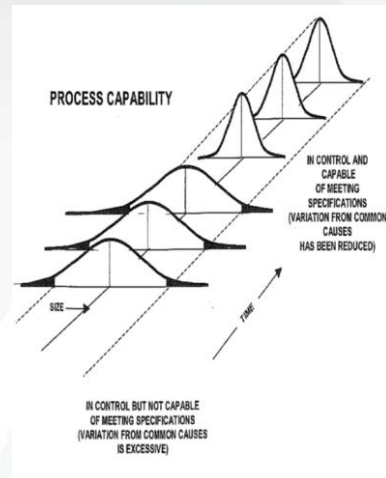

Cpk ≥ 1.33 typically
Cpk ≥ 1.67 for CTQ

Developed as part of NSF ATE Grant #1304474.

114

Check the Results

- Process Measures
 - Process Performance
 - Process Capability

Developed as part of NSF ATE Grant #1304474.

115

Check the Results

		Statistical Control	
		In-Control	Out-of-Control
Capability	Acceptable	Case 1	Case 2
	Unacceptable	Case 3	Case 4

- Case 1: process capable and-in control (stable)
 - Ideal for Customer, predictably provide product within specification
- Case 2: process capable but out-of-control
 - Generally not acceptable due to unpredictability
- Case 3: process not capable, but in-control
 - Can be accepted based on control of process, but special cause variation needs to be reduced (process stable, but can be out-of-specification)
- Case 4: process not capable and out-of-control
 - Not acceptable due to unpredictability and inability to meet specifications.

Developed as part of NSF ATE Grant #1304474.

CHECK THE RESULTS

ATC Grant #1304474

119

CHECK THE RESULTS

21CFR 211.22 Responsibilities of quality control unit.

(a) There shall be a quality control unit that shall have the responsibility and authority to approve or reject all components, drug product containers, closures, in-process materials, packaging material, labeling, and drug products, and the authority to review production records to assure that no errors have occurred or, if errors have occurred, that they have been fully investigated. The quality control unit shall be responsible for approving or rejecting drug products manufactured, processed, packed, or held under contract by another company...

ATC Grant #1304474

120

CHECK THE RESULTS

21CFR 820.80 Receiving, in-process, & finished device acceptance.

... (b) *Receiving acceptance activities.* ...Incoming product shall be inspected, tested, or otherwise verified as conforming to specified requirements. Acceptance or rejection shall be documented.

... (c) *In-process acceptance activities.* ...in-process product is controlled until the required inspection and tests or other verification activities have been completed, or necessary approvals are received, and are documented.

... (d) *Final acceptance activities.* ... Finished devices shall be held in quarantine or otherwise adequately controlled until released. Finished devices shall not be released for distribution until:

- (1) The activities required in the DMR are completed;
- (2) the associated data and documentation is reviewed;
- (3) the release is authorized by the signature of a designated individual(s); and
- (4) the authorization is dated.

CHECK THE RESULTS: Product Release

- Meet Specifications – Yes
- Ship the Product
 - Certificate of Analysis
 - Certificate of Conformance

Product Release

- Ship the Product
 - CERTIFICATE OF ANALYSIS

Document issued by Quality Assurance confirming that a product meets its product specification.

They commonly contain the actual results obtained from testing performed as part of quality control of an individual batch of a product.

Certificate of Conformance for Freight Container Mechanical Seal Testing

Customer: OneSeal A/S
Vibe Allé 2
2940 Kikkedal
Denmark

Attention: Mr. Lars Berenth

Purchase Order No.: LBI-118
Test Item: Bolt Seal
Part No.: 79706
Serial No.: 000001 through 000025
Specification No.: ISO/PAS 17712:2006(E)
Test Dates: 11 January 2008 through 23 January 2008

Dayton T. Brown Inc. certifies that 25 samples, 5 for each test, of Bolt Seal P/N 79706 were subjected to the following tests.

Test Name	Paragraph Number	Classification Rating
Tensile Test	6.2	High Security
Shear Test	6.3	High Security
Flex Test	6.4	High Security
Impact Test @ room temp	6.5	High Security
Impact Test @ reduced temp	6.5	High Security

Remarks: The above listed tests were completed with no discrepancies noted.

The test results contained herein pertain only to the specimens listed in this report. This report shall not be reproduced, except in full, without the written approval of Dayton T. Brown, Inc.

131

CHECK THE RESULTS

21CFR 211.22 Responsibilities of quality control unit.

(a) There shall be a quality control unit that shall have the responsibility and authority to approve or reject ... and the authority to review production records to assure that no errors have occurred or, **if errors have occurred, that they have been fully investigated.** ...

21 CFR 211.165 Testing and release for distribution.

...(f) Drug products failing to meet established standards or specifications and any other relevant quality control criteria shall be rejected. **Reprocessing may be performed.** Prior to acceptance and use, reprocessed material must meet appropriate standards, specifications, and any other relevant criteria...

Guidance for Industry, Q7A Good Manufacturing Practice Guidance for Active Pharmaceutical Ingredients

B. Reprocessing (14.2)

...reprocessing by repeating a crystallization step or other appropriate chemical or physical manipulation steps ...is generally considered acceptable... should be **preceded by careful evaluation** to ensure that the quality ... is not adversely affected due to the potential formation of by-products and over-reacted materials.

C. Reworking (14.3)

Before a decision is taken to rework batches ... **an investigation into the reason for nonconformance** should be performed... documentation to show that the reworked product is of equivalent quality to that produced by the original process. Concurrent validation

Developed as part of NSF ATE Grant #1304474.

132

CHECK THE RESULTS

21CFR 820.90 Nonconforming product.

(a) *Control of nonconforming product.* ... The procedures shall address the identification, documentation, evaluation, segregation, and disposition of nonconforming product. The evaluation of nonconformance shall **include a determination of the need for an investigation** and notification of the persons or organizations responsible for the nonconformance. The evaluation and any investigation shall be documented.

(b) *Nonconformity review and disposition.*

(1) ... procedures that define the **responsibility for review and the authority for the disposition of nonconforming product**. The procedures shall set forth the review and disposition process. Disposition of nonconforming product shall be documented. Documentation shall include the justification for use of nonconforming product and the signature of the individual(s) authorizing the use.

(2) Each manufacturer shall establish and maintain **procedures for rework**, to include retesting and reevaluation of the nonconforming product after rework, to ensure that the product meets its current approved specifications...

Developed as part of NSF ATE Grant #1304474.

133

CHECK THE RESULTS

ISO 9001:2008(E) 8.3 Control of Non-Conforming Product ISO 13485:2003

“... organization shall **ensure** that product which does **not conform** to product requirements is **identified and controlled to prevent its unintended** use or delivery. A documented procedure....

... organization shall deal with non-conforming product by one or more of the following ways:

a)... take action to eliminate detected non-conformity

b)...authorizing its use, release or acceptance under concession ...

[9001 ... concession by relevant authority or customer]

[13485 ...concession only if regulatory requirements are met..]

a)...take action to preclude its original intended use or application

...**when** nonconforming product is **corrected** it shall be **subject to re-verification** to demonstrate conformity....”

Developed as part of NSF ATE Grant #1304474.

134

 - Voice of the Customer, Regulatory review, Support function
- Transparency, Objectivity, Accountability
 - Teamwork
 - Conflict Resolution
 - Time / Project Management
 - Communication

Developed as part of NSF ATE Grant #1304474

154

TEAMWORK

- Types of Teams
- Membership
- Stages
- Conflict, groupthink, barriers
- Decision-Making

Developed as part of NSF ATE Grant #1304474

155

TEAMWORK

- Teams have become universal
 - Cross functional daily operations
- Types of Teams
 - Process / Continuous Improvement
 - Work Groups (Workcells)
 - Self-Managed

Developed as part of NSF ATE Grant #1304474

156

TEAMWORK

- Types of Teams
 - Work Groups (Work Cells): layout of workstations facilitate process step sequence, all operators within cell are cross-trained on tasks
 - Departments can also be referred to as work groups/teams
 - Example: Operations may encompass several product lines, each product line has a designated area and support staff (Engineering, QA/QC, Mechanics, Production Associates, etc.)
 - Self-Managed: directly manage day-to-day operation of process (department), have authority to make decisions
 - Set goals
 - Allocate assignments
 - Ownership of process

Developed as part of NSF ATE Grant #1304474

157

TEAMWORK

- Types of Teams
 - Work Groups
 - Self-Managed
 - Process Improvement: focus on improving or developing specific business processes
 - Cross-functional
 - Achieve specific goal
 - Management Sponsor (resource availability)
 - Project plan with start/end targets

Developed as part of NSF ATE Grant #1304474

158

TEAMWORK

- Membership
 - Roles & Responsibilities
 - Champion = initiates concept or idea for change/improvement
 - Sponsor = supports plans, activities and outcomes
 - Team Leader = Directs member efforts, coaches, communicates to management
 - Member(s) = participants, subject matter experts
 - Team meetings may also include
 - Facilitator = observes process and suggests changes to move forward; assists team leader in closing discussion; may provide training as needed
 - Scribe = designated note taker
 - Timekeeper = keeps meeting on track

Developed as part of NSF ATE Grant #1304474

159

TEAMWORK

- Stages
 - **Forming:** team comes together and begins process of understanding other members

Developed as part of NSF ATE Grant #1304474

160

TEAMWORK

- Stages
 - **Forming:** team comes together and begins process of understanding other members
 - Review the project
 - Establish roles (assigning task categories – contribution)
 - Determine meeting times (frequency)
 - Evaluate that all functions represented
 - **Storming:** team members adjusting to working as a team rather than individually
 - Project may be different than anticipated or more difficult
 - Conflict resolution

Developed as part of NSF ATE Grant #1304474

161

TEAMWORK

- Stages
 - Forming: team comes together and begins process of understanding other members
 - Storming: team members adjusting to working as a team rather than individually
 - **Norming:** agree on mutually accepted ideas to move forward
 - Some work gets accomplished
 - Trust is building
 - Share ideas and work products without hesitation

TEAMWORK

- Barriers

- Group-Think

“ Group members try to minimize conflict and reach a consensus decision without critical evaluation of alternative viewpoints, by actively suppressing dissenting viewpoints, and by isolating themselves from outside influences.

Loyalty to the group requires individuals to avoid raising controversial issues or alternative solutions, and there is loss of individual creativity, uniqueness and independent thinking...”

174

COMMUNICATION

Developed as part of NSF ATE Grant #1304474

175

COMMUNICATION

- The exchange of information between people by
 - Speaking
 - Writing
 - Using common systems of signs or behavior
- 5 types
 - Intrapersonal
 - Interpersonal
 - Small Group
 - Public
 - Mass Communications

Developed as part of NSF ATE Grant #1304474

176

COMMUNICATION

- Delivering your message
 - Direct Language
 - Factual and relevant details
 - Repetition / reiteration
 - Be aware of non-verbal message
 - Check often for understanding
- Email, Phone, Face-to-Face

Developed as part of NSF ATE Grant #1304474

177

COMMUNICATION

- Barriers
 - Attitude
 - negative prevent adapting to change
 - overly optimistic miss what actually occurring
 - Experience
 - Oversharing
 - Newbie wanting to prove
 - Mood
 - when grumpy may not listen
 - when joyful interrupt others
 - Noise Level
 - Hearing all the messages
 - Non-Verbal Messages
 - Subject Knowledge
 - Wording

Developed as part of NSF ATE Grant #1304474

178

COMMUNICATION

- **Barriers**
 - **Attitude** (negative versus overly optimistic)
 - **Experience** (oversharing versus newbie)
 - **Mood** (grumpy versus joyful)
 - **Noise Level** (hearing all the messages?)
 - **Non-Verbal Messages**
 - Demonstrate engagement (i.e. eye contact, relaxed)
 - Back to the person indicates not interested
 - **Subject Knowledge**
 - The know-it-all
 - pretending loses credibility & erodes trust
 - **Wording**
 - be non-ambiguous,
 - get to the point,
 - maybe a quick greeting will break the ice (i.e. email salutation)
 - English as second language
