
BioMEMS Overview Activity

Participant Guide

Description and Estimated Time to Complete

This activity provides the opportunity for you to demonstrate your understanding of the various applications in which bioMEMS are being applied and considered. It is recommended that you read the BioMEMS Overview PK prior to starting this activity.

Estimated Time to Complete

Allow approximately 30 minutes to complete this activity.

Introduction

BioMEMS is a subset of microelectromechanical systems (MEMS) and microtechnology. BioMEMS applies to biological systems in general and, in particular, to human health. The evolution of microtechnologies coupled with the recent advances in the understanding of genomics, proteomics, and biotechnology techniques permit new and exciting opportunities for advancing the applications of bioMEMS devices.

Many areas are already benefitting from the use of microtechnology to improve health care and serve to enhance the understanding of biological systems. BioMEMS provides the opportunity to improve upon current methods, develop new ones, and potentially lower the cost of medical care.

Activity Objectives and Outcomes

Activity Objectives

- Create a bioMEMS illustration that demonstrates your knowledge of areas in which bioMEMS are currently used and have the potential to be used.

Activity Outcomes

You will create a chart or tree that illustrates the various fields in which bioMEMS are currently used and areas of future use and some of the applications in each field.

Supplies

You may choose to use pictures and a physical graphic to create your illustration or use a graphics program and create your illustration on the computer.

If you create a physical graphic, you'll need at least the following items:

Markers

Rulers

Poster board or stock paper

Activity: BioMEMS applications

Description

In this activity you will create an illustration that demonstrates your knowledge of bioMEMS area and their applications.

1. Create a bioMEMS applications tree

Create an illustration such as a bioMEMS tree, which illustrates the various areas into which bioMEMS have branched. To each area list existing and potential bioMEMS devices or applications.

Choose to use pictures or graphics to better illustrate the specific applications.

2. Answer the Post-activity questions

Post-Activity Questions

1. What are the differences and similarities between MEMS and bioMEMS used in medical applications?
2. Describe a device that would be considered a combination of MEMS and bioMEMS.
3. Describe a potential application for bioMEMS and describe the bioMEMS devices that could be used for your application.

This Learning Module was developed in conjunction with Bio-Link, a National Science Foundation Advanced Technological Education (ATE) Center for Biotechnology @ www.bio-link.org.

Support for this work was provided by the National Science Foundation's Advanced Technological Education (ATE) Program through Grants. For more learning modules related to microtechnology, visit the SCME website (<http://scme-nm.org>).
